Leading the World in Vestibular & Equilibrium Education

# Who We Are...

The American Institute of Balance (AIB) is a global healthcare company based in Tampa Bay, Florida. AIB specializes in post-graduate education and certification. The Institute is recognized as the proven leader in the evaluation, treatment, and education of Vestibular and Equilibrium Science and Concussion Management. Since 1992, AIB has trained and certified over 15,000 practitioners worldwide through workshops, online education, and corporate training programs.

AIB's workshops and certification programs are designed to give the busy clinician specialized tools to immediately implement into practice, with a focus on patient management strategies that translate directly to improved patient outcomes.

AIB offers certification and training programs for corporate, hospital health systems, and private practice organizations. Private and corporate training programs are ideal for groups or organizations who wish to minimize the cost associated with travel, in addition to the impact on clinical operations. AIB proudly offers discounted and competitive rates to help minimize such barriers, all while obtaining clinical certification and CEUs.

# Benefits of Education & Clinical Certification

Demonstrates to both patients and referral sources your commitment to providing a high level of patient care

Distinguishes your practice from competition through use of evidence based, industry respected, best practices

Improves patient outcomes through the utilization of evidence-based protocols

Provides leverage with payor sources through improved patient outcomes

Facilitates consistency with patient care amongst clinicians company-wide

Upon completion of course and certification exam, access to a comprehensive on-line data base of over 5,000 research publications

Certified providers listed on dizzy.com "Find a Provider" tab, making it easy for patients to locate you

Discounted, competitive rates for corporate and private venues

Certification courses available to be delivered in HYBRID format with weekend availability for the on-site, live-course component.

# Corporate & Private Workshops

The American Institute of Balance is excited to announce that the Vestibular Rehabilitation and Vestibular Rehabilitation and Concussion Certification workshops are now available in a hybrid model, consisting of self-paced online content, followed by a one-day, live course focusing on the hands-on, practical implementation.

This hybrid platform requires less travel and time away from home and work and allows the clinician the flexibility to complete the online portion of the course at a self-pace without the demand of attending a pre-determined, scheduled workshop.

After completion of the online component, participants will attend the live, one-day hands-on clinical competency course. To ensure a complete, comprehensive learning experience, we encourage participants to attend the one-day, live, hands-on course AFTER completion of the online content.

Certification is earned once participants have completed BOTH the online and live portions and have passed BOTH the written exam for the online component, and the competency based exam during the one-day live component.

# Certification Courses Available

## Vestibular Rehabilitation Certification

This combined 19.5-hour (12 hours online, 7.5 hours live), competency-based course will be the foundation for the learner as a Certified Vestibular Specialist. The course will expand upon introductory coursework for vestibular dysfunction as it relates to benign paroxysmal positional vertigo (BPPV), and vestibular hypo-function, including assessment and rehabilitation. Canalith repositioning maneuvers (CRM) and vestibular rehabilitation therapy (VRT) protocols are included as part of the comprehensive management plan for identifiable vestibular and balance system disorders. Evidence-based integration into management principles will be disseminated throughout both the online and live components of the course.

## Vestibular Rehabilitation & Concussion Certification

This combined 30-hour course (21 hours online, 9 hours live) is geared toward the clinician interested in learning evidence-based management for both Vestibular and Concussion (m-TBI) patients. This workshop is comprised of the Vestibular Rehabilitation Certification Workshop and a comprehensive Concussion Management module, consisting of evaluation and management tools for sports and non-sports related m-TBI. Evidence-based protocols will be presented, demonstrated, and practiced throughout both the online and live components of the course to ensure clinicians produce excellent outcomes.

# Faculty

Richard E. Gans, PhD  
Founder and Executive Director

Kim Rutherford, PT  
DSc, COMT
